PhD Thesis: “To improve Mongolian students’ English pronunciation using computer technology”

Abstract

Within the scope of PhD thesis, the study focused on discovering an opportunity to improve English pronunciation of students learning in non-English language program using computer technology. The study researched computer technology as a version to correct pronunciation of learners by putting it into the scientific circulation. Outcome of the study was widely possible not only to be practiced in English methodology and computer technology used in foreign language training, conducting methodological courses, seminars and lectures on English pronunciation but also publishing research, training and methodological materials. The study which discovered the opportunity to reveal and correct the pronunciation mistakes that mentioned above within short time by using appropriate exercises and tasks, suggested that foreign language training based on computer technology is fully capable of influencing improvement in foreign language knowledge of learners. Some of the higher education institutions in Mongolia widely use computer technology in their foreign language training, there is a great opportunity to introduce Computer Assisted Pronunciation Teaching (CAPT) into the training, the present study says. Computer is the significant instrument to encourage foreign language training. In other words, it plays a key role in the reform of the educational industry in the way of enriching the training process and methodology.
